                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   oligo-dT primer containing a Not I site. Double stranded cDNA was size selected according to mRNA size fraction, ligated with EcQR I adaptor, digested with Not I, and then cloned directionally into pYX-Asc vector. The library tag sequence located between the Not I site and the polyA tail, is TGAAGGAGC. This library was created for the University of Iowa Mouse Brain Molecular Anatomy Project (BMAP): 'Gene Discovery in the Developing Mouse Nervous System', supported by National Instututes of Mental Health (NIMH), Hemin Chin, Ph.D., program coordinator."

```

cDNA was size selected according to mRNA size fraction, ligated with EcoR I adaptor, digested with Not I, and then cloned directionally into pYx-Asc vector. The library tag sequence located between the Not I site and the polyA tail, is GTGCGTGGAA. This library was created for the University of Iowa Mouse Brain Molecular Anatomy Project (BMAP): 'Gene Discovery in the Developing Mouse Nervous System', supported by National Instututes of Mental Health (NIMH), Hemin Chin, Ph.D., program coordinator."

```
AAT39786-T39803 represent novel human and mouse genes encoding Src-
CC homology region 3 (SH3) domain containing proteins that can be used in
CC the method of the invention. SH3 domain containing proteins play a role
CC in signalling and structural elements of cells. The method of the
CC invention is for identifying polypeptides containing functional domains
CC multivalent recognition unit (RW) complex with a number of peptides and
CC complex. The method is based on functional similarities and does not rely
CC complex. The method is based on functional similarities and does not rely
CC on sequence similarities. Prior methods only gave limited success for
CC sequence homology among known SH3 proteins. It has been found that small
CC peptide RUs in multivalent form have reduced specificity for a given
CC particularly suited to screening for polypeptides containing functional
CC domains that are similar to, but not identical in sequence to, the
CC original target functional domain. The new method enables proteins having
CC a common function to be identified. Identification of novel SH3 proteins
CC identified, and their specificities (e.g. pharmacological activities) can
CC identified, and their specificities (e.g. pharmacological activities) can
CC be assessed using the method of the invention

New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity.

Claim 1; SEQ ID NO 20566; 103pp; English.

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain CC reaction (PCR) primers, oligomers, and for chromosome and gene mapping, CC and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed CC in diagnostics as expressed sequence tags for identifying expressed CC genes. (I) is useful in gene therapy techniques to restore normal CC activity of (II) or to treat disease states involving (II). (II) is comply the control of the sequence of the invention. Note: The sequence data for this control of the control of co ftp.wipo.int/pub/published_ pct sequences

                                                                                                 Corresponding to a novel human SH3 gene, termed the SH3DIA gene, that contributes to the development of platelets and the pathogenesis of leukaemias, both in general and in particular those involving the cargion for low platelets on chromosome 21. Sequencing of 5 different curies of cDNA clone from foetal brain (see AAZ34570-74) suggests that at cargion for low platelets on chromosome 21. Sequencing of 5 different curies of cDNA clone from foetal brain (see AAZ34570-74) suggests that at cargion for low platelets on chromosome 21. Sequencing of 5 different curies of cDNA clone from foetal brain (see AAZ34570-74) suggests that at cargion for low platelets on chromosome 21. Sequencing of 5 different curies at 3 isoforms exist. The invention provides methods for the diagnosis curies of cDNA clone from foetal brain (see AAZ34570-74) suggests that at cargion for 21 invention provides methods for the diagnosis curies and treatment of megakaryocytic abnormality, myeloproliferative disorder, platelet disorder, disorders including brain malformations and corresponding cognitive dysfunctions, microcephaly, lissencephaly, carginate themselves; screening for a somatic alteration in the SH3D1A curies and colpocephaly. Methods are also provided for: suppressing cells unable to regulate themselves; screening for a somatic alteration in the SH3D1A curies and colpocephaly and adequacy of a treatment; monitoring curies consider, hashing the progress on megakaryocytic abnormality, myeloproliferative disorder, nematopoietic disorder, platelet disorder or leukaemia; and treatment hashing the progress or megakaryocytic abnormality hashormalive disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     멍

The invention describes an isolated nucleic acid molecule (I) encoding a novel central nervous system protein. (I) and polypeptides (III) encoded by (I), are used to treat a medical conditions and in diagnosis of a pathological condition. Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatcoid arthritis, hyperproliferative disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. cardiovascular disorders e.g. cardiovascular disorders e.g. cardiovascular disorders e.g. Alzheimer's disease and amylotrophic lateral sclerosis, infections caused by bacteria, viruses e.g. Acquired immunodeficiency virus (AIDS) and fungi, ocular disorders e.g. corneal infection, gastrointestinal disorders e.g. dysphagia, adenocarcinomas and irritable bowel syndrome, reproductive system disorders e.g. testicular feminisation, endocrine disorders e.g. diabetes disorders e.g. testicular feminisation, endocrine disorders e.g. diabetes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  17-NOV-2000;

The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities, fat content, lipid, protein,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            No.:

          The invention relates to human polynucleotides (AAI63803-AAI64012) and the encoded proteins (AAM434497-AAM43660) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes were isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 17-NOV-2000;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                17-NOV-2000;

Particularly overexpression of Esel is used to block clathrin-mediated endocytosis in vivo or in cell cultures, while administration of [1] is used to promote endocytosis of selected cells. (Ant) agonists of [1] or Ab are used to suppress abnormal proliferation of cells that can be stimulated to proliferate by a growth factor receptor; and similar infection. Endocytosis may also be regulated, in vivo or in cell cultures, by forming an Ese-Esp15 complex, then binding dynamin to the complex. Generally conditions that can be treated include cancer; abnormal call division or micration. Vival infection.
                                                                                                                                                                                                                                             28-FEB-2000

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 RESULT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      吊
         This is the nucleotide sequence of full-length cDNA (clone 11)

C corresponding to a novel human SH3 gene, termed the SH3D1A gene, that

C contributes to the development of platelets and the pathogenesis of

C leukaemias, both in general and in particular those involving the

C megakaryocytic lineage. The SH3D1A gene maps to the small candidate

C region for low platelets on chromosome 21. Sequencing of 5 different

C sizes of cDNA clone from foetal brain (see AAZ34570-74) suggests that at

C least 3 isoforms exist. The invention provides methods for the diagnosis

C and treatment of megakaryocytic abnormality, myeloproliferative disorder,

C platelet disorder, acute leukaemia, neural disorders, thromobocytopenia,

C platelet disorder on chromosome 21, low platelets in deletion for 21,

C association of gains in chromosome 21 with leukaemias, neural

C and corresponding cognitive dysfunctions, microcephaly, lissencephaly,

C and colpocephaly. Methods are also provided for: suppressing cells unable

C and colpocephaly. Methods are also provided for: suppressing cells unable

C to regulate themselves; screening for a somatic alteration in the SH3D1A

C gene, monitoring the progress and adequacy of a treatment; monitoring

C tumour risk progress or megakaryoctyic abnormality, myeloproliferative

disorder, haematopoietic disorder, platelet disorder or leukaemia; and

C treatment of a suntisect (including a normalial suntiect) having
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  megakaryocytic abnormality; myeloproliferative disorder; platelet disorder; neural disorder; thromobocytopenia; haematopoietic disorder; cognitive dysfunction; microcephaly; lissencephaly; colpocephaly; holoprosencephaly; diagnosis; therapy; ss.

CC proteins (I) and their splice variants (Ese = EH-domain and 2 cregulator of endocytosis). (I) are involved in regulation of clathrin-cc mediated endocytosis (as a complex with Esplis protein), vesicular crafficking and actin cytoskeleton. Generally (I) (or its (ant)agonists, complex with Esplis protein), vesicular cytoskeleton. Generally (I) (or its (ant)agonists, complex mutants); (I)-specific antibodies (Ab); complex expression of Ese genes or antagonists of an Ese binding partner are used to treat diseases associated with undestrable endocytosis and resulting complex in cellular function. Particularly overexpression of Esel is used to block clathrin-mediated endocytosis in vivo or in cell cultures, while administration of (I) is used to promote endocytosis of selected cells. (Ant)agonists of (I) or Ab are used to suppress abnormal proliferation of cells that can be stimulated to proliferate by a growth factor receptor; and similar compounds (also inactive Ese mutants) can be used to prevent complex. Generally conditions that can be treated include cancer; cabnormal cell division or migration; viral infection; or abnormal cell division or migration; viral infection; or abnormal cell division or migration; viral infection; or abnormal cell creptor signalling, tissue development or synaptic transmission. The present sequence represents mouse Esell cDNA sequence

Nucleic acid from the human SH3D1A gene and its products, useful for the diagnosis and treatment of myeloproliferative disorders and leukemia.

Claim 2; Fig 8; 99pp; English.

CC corresponding to a novel human SH3 gene, termed the SH3D1A gene, that CC contributes to the development of platelets and the pathogenesis of CR leukaemias, both in general and in particular those involving the CC megakaryocytic lineage. The SH3D1A gene maps to the small candidate CR sizes of CDNA clone from fostal brain (see AAZ34570-74) suggests that at CR sizes of CDNA clone from foetal brain (see AAZ34570-74) suggests that at CR least 3 isoforms exist. The invention provides methods for the diagnosis and treatment of megakaryocytic abnormality, myeloproliferative disorder, platelet disorder, acute leukaemia, neural disorders, thromobocytopenia, CR platelet disorder on chromosome 21 with leukaemias, neural creative disorder, acute leukaemia, neural disorders including brain malformations and corresponding cognitive dysfunctions in chromosome 21 with leukaemias, neural calpocephaly. Methods are also provided for: suppressing cells unable creative themselves; screening for a somatic alteration in the SH3D1A creatment; monitoring the progress and adequacy of a treatment; monitoring treatment of a subject (including a prenatal subject) having treatment, monitoring treatment; monitoring companiaty, myeloproliferative disorder, platelet disorder, platelet calcider, p

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ş
                                                                                                                                                           sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders polypeptide and polynucleotic expression or biological activity. The
         diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to isolated polynucleotide (I) and polypeptide (II)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 1; SEQ ID NO 20567; 103pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated polynucleotide and encoded polypeptides, useful diagnostics, forensics, gene mapping, identification of mutat responsible for genetic disorders or other traits and to assebiodiversity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       31-MAR-2000; 2000US-00540217

CC AANT39786-T39803 represent novel human and mouse genes encoding SrcCC the method of the invention. SH4 domain containing proteins play a role
CC the method of the invention. SH4 domain containing proteins play a role
CC in signalling and structural elements of cells. The method of the
CC in signalling and structural elements of cells. The method of the
CC invention is for identifying polypeptides containing functional domains
CC of interest (especially SH3 domains). The method comprises contacting a
CC identifying polypeptides having a selective binding affinity for the RU
CC complex. The method is based on functional similarities and does not rely
CC complex. The method is based on functional similarities and does not rely
CC consequence similarities. Prior methods only gave limited success for
CC identifying proteins which contain an SH3 domain due to the minimal
CC sequence homology among known SH3 proteins. It has been found that small
CC geptide RUs in multivalent form have reduced specificity for a given
CC peptide RUs in multivalent form have reduced specificity for a given
CC functional domain compared to monomer RUs. Multivalent RU complexes are
CC particularly suited to screening for polypeptides containing functional
CC contains that are similar to, but not identical in sequence to, the
CC original transduction to be identified. Identification of novel SH3 proteins
CC will be useful for a better understanding of cell growth, malignancy,
CC signal transduction processes, etc. New candidate drugs can be signal transduction processes, etc. New candidate drugs can be identified, and their specificities (e.g. pharmacological activities) be assessed using the method of the invention

New nucleic acid encoding Esel and 2 proteins, involved in regulation of endocytosis, used e.g. for treating cancer or preventing viral infection

Claim 25; Page 46-48; 99pp; English.

with Esp15 protein), vesicular trafficking and actin cytoskeleton. Generally (I) (or its (ant)agonists, mimetics, fragments and inactive mutants); (I)-specific antibodies (Ab), sequences antisense to the (I) polynucleotide; agents that downregulate expression of Ese genes or antagonists of an Ese binding partner are used to treat diseases associated with undesirable endocytosis and resulting changes in cellular function. Particularly overexpression of Ese1 is used to block clathrin-mediated endocytosis in vivo or in cell cultures, while administration of (I) is used to promote endocytosis of selected cells. (Ant)agonists of (I) or Ab are used to suppress abnormal proliferation of cells that can be stimulated to proliferate by a growth factor receptor; and similar compounds (also inactive Ese mutants) can be used to prevent viral infection. Endocytosis may also be regulated, in vivo or in cell infection. Endocytosis may also be regulated, in vivo or in cell contractive Ese mutants, then binding dynamin to the contents. The present sequence encodes mouse Ese2. The present invention specifically describes mammalian Ese1 and 2 proteins (I) and their splice variants (Ese = EH-domain and SH3-domain regulator of endocytosis). (I) are involved in regulation of clathrin-mediated endocytosis (as a complex are involved in regulation of clathrin-mediated endocytosis (as a complex are involved in regulation of clathrin-mediated endocytosis (as a complex are involved in regulation of clathrin-mediated endocytosis (as a complex are involved in regulation of clathrin-mediated endocytosis (as a complex are involved in regulation of clathrin-mediated endocytosis (as a complex are involved in regulation of clathrin-mediated endocytosis (as a complex are involved in regulation of clathrin-mediated endocytosis (as a complex are involved in regulation of clathrin-mediated endocytosis). complex. Generally conditions that can be treated include cancer; abnormal cell division or migration; viral infection; or abnormal receptor signalling, tissue development or synaptic transmission cellular Q.

```
AA AAT39786-T39803 represent novel human and mouse genes encoding Src-
CC homology region 3 (SH3) domain containing proteins that can be used in
CC the method of the invention. SH3 domain containing proteins play a role
CC in signalling and structural elements of cells. The method of the
CC invention is for identifying polypeptides containing functional domains
CC of interest (especially SH3 domains). The method comprises contacting a
CC comultivalent recognition unit (RH) complex with a number of peptides and
CC identifying polypeptides having a selective binding affinity for the RU
CC complex. The method is based on functional similarities and does not rely
CC on sequence similarities. Prior methods only gave limited success for
CC identifying proteins which contain an SH3 domain due to the minimal
CC sequence homology among known SH3 proteins. It has been found that small
CC geptide RUs in multivalent form have reduced specificity for a given
CC particularly suited to screening for polypeptides containing functional
CC gomains that are similar to, but not identical in sequence to, the
CC original target functional domain. The new method enables proteins having
CC a common function to be identified. Identification of novel SH3 proteins
CC will be useful for a better understranding of cell growth, malignancy,
CC signal transduction processes, etc. New candidate drugs can be
CC dentified, and their specificities (e.g. pharmacological activities) can
CC dentified the method of the invention

Isolated nucleic acid molecules encoding novel ovarian polypeptides, useful in the prevention, treatment and diagnosis of cancer (e.g. ov cancer), immune disorders, cardiovascular disorders and neurological ovarian

Claim 1; SEQ ID NO 887; 2922pp; English

cc shock syndrome), inflammatory conditions (e.g., mastitis, ophoritis and cyalinitis), immune disorders (e.g., congenital and acquired vaginitis), immune disorders (e.g., congenital and acquired commune disorders (e.g., anaemia), cardiovascular disorders, cc lood-related disorders (e.g., anaemia), cardiovascular disorders, card The invention relates to 2175 novel human ovarian antigens (ABP41054-ABP43228) and to cDNAs encoding them (ABQ54131-ABQ56305), and also encompasses polypeptides 90% identical and polymucleotides 95% identical to the sequences of the invention. The invention additionally relates to recombinant vectors and host cells comprising human ovarian antigen polymucleotides, antibodies against human ovarian antigens, and the use of ovarian antigen polymucleotides and polypeptides in diagnosing, treating, prognosing or preventing various ovary and/or breast-related disorders. Such conditions include ovarian cancer and breast cancer, and metastatic tumours of ovarian or breast origin, reproductive system disorders (e.g., infertility, disorders of pregnancy, anovulation, polycystic ovary syndrome, ovarian cysts, and dymenorrhoea), endocrine disorders, infections (e.g., chlamydia, HIV, toxoplasmosis, and toxic chock syndrome) inflammatory conditions (e.g., chlamydia, HIV, toxoplasmosis, and conhoritis and

This is the nucleotide sequence of a non-full-length cDNA (clone 9) CC corresponding to a novel human SH3 gene, termed the SH3D1A gene, that CC contributes to the development of platelets and the pathogenesis of CC leukaemias, both in general and in particular those involving the CC megakaryocytic lineage. The SH3D1A gene maps to the small candidate CC region for low platelets on chromosome 21. Sequencing of 5 different CC sizes of cDNA clone from foetal brain (see AAZ34570-74) suggests that at least 3 isoforms exist. The invention provides methods for the diagnosis CC platelet disorder, acute leukaemia, neural disorders, thromobocytopenia, CC platelet disorder, acute leukaemia, neural disorders, thromobocytopenia, CC absociation of gains in chromosome 21, low platelets in deletion for 21, CC abnormalities, dysfunctions and disorders including brain malformations and corresponding cognitive dysfunctions, microcephaly, lissencephaly, CC and colpocephaly. Methods are also provided for: suppressing cells unable to regulate themselves, screening for a somatic alteration in the SH3D1A cc gene; monitoring the progress and adequacy of a treatment; monitoring
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            망

CC corresponding to a novel human $H3 gene, termed the $H3D1A gene, that CC contributes to the development of platelets and the pathogenesis of CC leukaemias, both in general and in particular those involving the CC megakaryocytic lineage. The $H3D1A gene maps to the small candidate cregion for low platelets on chromosome 21. Sequencing of 5 different CC sizes of cDNA clone from focetal brain (see AAZ34570-74) suggests that at CC least 3 isoforms exist. The invantion provides methods for the diagnosis and treatment of megakaryocytic abnormality, myeloproliferative disorder, acute leukaemia, neural disorders, thromobocytopenia, CC platelet disorder on chromosome 21, low platelets in deletion for 21, association of gains in chromosome 21 with leukaemias, neural abnormalities, dysfunctions and disorders including brain malformations and corresponding cognitive dysfunctions, microcephaly, lissencephaly, and corresponding cognitive dysfunctions, microcephaly, lissencephaly, and corresponding cognitive dysfunctions, microcephaly, lissencephaly, companies of a treatment; monitoring the progress and adequacy of a treatment; monitoring tumour risk progress or megakaryoctyic abnormality, myeloproliferative disorder, leukaemia; and creatment of a subject (including a prenatal subject) having the progress of the subject of a subject (including a prenatal subject) having companies of the subject of an antisense nucleic acid that expresses SH3D1A or its antisense nucleic acid

                                                                                                                                                                                                                                                                                                                                 This is the nucleotide sequence of full-length cDNA (clone 21) corresponding to a novel human SH3 gene, termed the SH3DIA gene, that CC contributes to the development of platelets and the pathogenesis of CC leukaemias, both in general and in particular those involving the CC megakaryocytic lineage. The SH3DIA gene maps to the small candidate coregion for low platelets on chromosome 21. Sequencing of 5 different CC sizes of cDNA clone from foetal brain (see AAZ34570-74) suggests that at CC least 3 isoforms exist. The invention provides methods for the diagnosis and treatment of megakaryocytic abnormality, myeloproliferative disorder, clutelet disorder, acute leukaemia, neural disorders, thromobocytopenia, association of gains in chromosome 21 with leukaemias, neural corresponding cognitive dysfunctions, microcephaly, lissencephaly, and colpocephaly. Methods are also provided for: suppressing cells unable gene; monitoring the progress and adequacy of a treatment; monitoring the progress and adequacy of a treatment; monitoring the progress or megakaryoctyic abnormality, myeloproliferative custored, leukaemia; and megakaryocytic abnormality, myeloproliferative custored, leukaemia; and colpocephaly between the progress or megakaryoctyic abnormality, myeloproliferative custored, platelet disorder, platelet di

The invention relates to isolated polynucleotide (I) and polypeptide (II) creation (PCR) primers, oligomers, and for chromosome and gene mapping, compared in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed compared in gene therapy techniques to restore normal compared in the sequence tags for identifying expressed compared in the sequence tags for identifying (II). (II) is compared in the sequence sequence set the sequence and as a food complymential in tissue, as molecular weight markers and as a food complymential in the similar partners are useful in medical imaging constitution of sequence in the sequence have applications in the compared in the sequence in the sequen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAS84762
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        RESULT 7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           뭥
                                                         amino acid sequences. AAS64197-AAS94564 represent novel human diagnocoding sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained electronic format directly from WIPO at

The present sequence encodes manuse Esel. The present invention consecutive specifically describes mammalian Esel and 2 proteins (I) and their splice variants (Ese = EH-domain and $H3-domain regulator of endocytosis). (I) corriants (Ese = EH-domain and $H3-domain regulator of endocytosis) (as a complex composition of clathrin-mediated endocytosis (as a complex with Espl5 protein), vesicular trafficking and actin cytoskeleton. Complex (Espl5) (I) (or its (ant)agonists, mimetics, fragments and inactive mutants); (I) specific antibodies (Ab); sequences antisense to the (I) correspondents that downregulate expression of Ese genes or complex endocytosis of an Ese binding partner are used to treat diseases antisense to the constitution. Particularly overexpression of Esel is used to block clathring mediated endocytosis in vivo or in cell cultures, while administration of (I) or Ab are used to suppress abnormal proliferation of cells that can be stimulated to promote endocytosis and receptor; and similar

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               compounds (also inactive Ese mutants) can be used to prevent viral infection. Endocytosis may also be regulated, in vivo or in cell cultures, by forming an Ese-Espis complex, then binding dynamin to complex. Generally conditions that can be treated include cancer; abnormal cell division or migration; viral infection; or abnormal

```

The present sequence encodes mouse Esel. The present invention specifically describes mammalian Esel and 2 proteins (I) and their splice variants (Ese = EH-domain and SH3-domain regulator of endocytosis). (I) are involved in regulation of clathrin-mediated endocytosis (as a complex are involved in regulation of clathrin-mediated endocytosis (as a complex are involved in regulation of clathrin-mediated endocytosis (as a complex are involved in regulation of clathrin-mediated endocytosis (as a complex are involved in regulation of clathrin-mediated endocytosis (as a complex are involved in regulation of clathrin-mediated endocytosis (as a complex are involved in regulation of clathrin-mediated endocytosis).

Particularly overexpression of Esel is used to block clathrin-mediated endocytosis in vivo or in cell cultures, while administration of [1] is used to promote endocytosis of selected cells. (Ant) agonists of [1] or Ab are used to suppress abnormal proliferation of cells that can compounds (also inactive Ese mutants) can be used to prevent viral infection. Endocytosis may also be regulated, in vivo or in cell cultures by forming an Ese-Espl5 complex, then binding dynamin to the

Endocytosis may also be regulated, in vivo or in cell cultures, by forming an Ese-Esp15 complex, then binding dynamin to the complex. Generally conditions that can be treated include cancer; abnormal cell division or migration; viral infection; or abnormal receptor signalling, tissue development or synaptic transmission. The present sequence represents mouse Ese1L coding sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           regulator of endocytosis). (I) are involved in regulation of clathrin-
mediated endocytosis (as a complex with Esp15 protein), vesicular
trafficking and actin cytoskeleton. Generally (I) (or its (ann) agonists,
minetics, fragments and inactive mutants); (I)-specific antibodies (Ab);
sequences antisense to the (I) polynucleotide, agents that downregulate
expression of Ese genes or antagonists of an Ese binding partner are use
to treat diseases associated with undesirable endocytosis and resulting
changes in cellular function. Particularly overexpression of Esel is use
to block clathrin-mediated endocytosis in vivo or in cell cultures, whil
administration of (I) is used to promote endocytosis of selected cells.

cc proteins (I) and their splice while the second of capulator of endocytosis). (I) are involved in regulation of clathrin-cc mediated endocytosis (as a complex with Espl5 protein), vesicular cc trafficking and actin cytoskeleton. Generally (I) (or its (ant)agonists, cc mimetics, fragments and inactive mutants); (I)-specific antibodies (Ab); esquences antisense to the (I) polynucleotide; agents that downregulate cc expression of Ese genes or antagonists of an Ese binding partner are used to treat diseases associated with undesirable endocytosis and resulting cc changes in cellular function. Particularly overexpression of Esel is used to block clathrin-mediated endocytosis in vivo or in cell cultures, while capulated capulated endocytosis of selected cells. (Ant)agonists of (I) or Ab are used to suppress abnormal proliferation of (C calls that can be stimulated to proliferate by a growth factor receptor; cand similar compounds (also inactive Ese mutants) can be used to viral infection. Endocytosis may also be regulated, in vivo or in cell cultures, by forming an Ese-Espl5 complex, then binding dynamin to the complex. Generally conditions that can be treated include cancer; cabnormal cell division or migration; viral infection; or abnormal cell creceptor signalling, tissue development or synaptic transmission. The present sequence represents mouse Esell cDNA sequence

New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess

Claim 1; SEQ ID NO 20567; 103pp; English.

cc reaction (PCB) primers, oligomers, and for chromosome and gene mapping, ci n diagnostics as expressed sequence tags for identifying expressed cg enes. (I) is useful in gene therapy techniques to restore normal cg enes. (I) is useful in gene therapy techniques to restore normal cg useful for generating antibodies against it, detecting or quantitating a cg cuspiperide in tissue, as molecular weight markers and as a food cg plypepride in tissue, as molecular weight markers and as a food cg supplement. (II) and its binding partners are useful in medical imaging ci fits expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The camenous for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and camino acid sequences. AAS6419-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this capatent did not appear in the printed specification, but was obtained in celectronic format directly from MIPO at the invention of the printed specification. The invention relates to isolated polynucleotide (I) and polypeptide (II) ftp.wipo.int/pub/published is useful as hybridisation probes, polymerase chain _pct_sequences

CC invention is for identifying polypeptides containing functional domains CC of interest (especially SH3 domains). The method comprises contacting a CC multivalent recognition unit (RU) complex with a number of peptides and CC identifying polypeptides having a selective binding affinity for the RU complex. The method is based on functional similarities and does not rely complex. The method is based on functional similarities and does not rely complex. The method is based on functional similarities and does not rely complex. The method is based on functional similarities and does not rely complex. The method sonly gave limited success for complex for proteins which contain an SH3 domain due to the minimal compared to monomer RUs. It has been found that small peptide RUs in multivalent form have reduced specificity for a given comparing that are similar to, but not identical in sequence to, the coriginal target functional domain. The new method enables proteins having common function to be identified. Identification of novel SH3 proteins compared to monomer RUs. Multivalent for over SH3 proteins common function to be identified. Identification of novel SH3 proteins compared to a better understanding of cell growth, malignancy, condentified, and their specificities (e.g. pharmacological activities) can be assessed using the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               RESULT 13

AAT39786-T39803 represent novel human and mouse genes encoding Srchomology region 3 (SH3) domain containing proteins that can be used in the method of the invention. SH3 domain containing proteins play a role in signalling and structural elements of cells. The method of the invention is for identifying polypeptides containing functional domains of interest (especially SH3 domains). The method comprises contacting a multivalent recognition unit (RU) complex with a number of peptides and identifying polypeptides having a selective binding affinity for the RU

The method is based on functional similarities and does not rely con sequence similarities. Prior methods only gave limited success for cc identifying proteins which contain an SH3 domain due to the minimal cc sequence homology among known SH3 proteins. It has been found that small peptide RUs in multivalent form have reduced specificity for a given cc functional domain compared to minimare RUS. Multivalent RU complexes are cc functional domain compared to minimare RUS. Multivalent RU complexes are comparing to screening for polypeptides containing functional congruence to, the cc original target functional domain. The new method enables proteins having a common function to be identified. Identification of novel SH3 proteins cc will be useful for a better understanding of cell growth, malignancy, cc signal transduction processes, etc. New candidate drugs can be condiminated using the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁

AA AAT39786-T39803 represent novel human and mouse genes encoding Src-
CC homology region 3 (SH3) domain containing proteins that can be used in
CC the method of the invention. SH3 domain containing proteins play a role
CC in signalling and structural elements of cells. The method of the
CC invention is for identifying polypeptides containing functional domains
CC of interest (especially SH3 domains). The method comprises contacting a
CC invention is for identifying polypeptides containing functional domains
CC identifying polypeptides having a selective binding affinity for the RU
CC complex. The method is based on functional similarities and does not rely
CC on sequence similarities. Prior methods only gave limited success for
CC identifying proteins which contain an SH3 domain due to the minimal
CC sequence homology among known SH3 proteins. It has been found that small
CC particularly suited to screening for polypeptides containing functional
CC particularly suited to screening for polypeptides containing functional
CC original target functional domain. The new method enables proteins having
CC admains that are similar to, but not identical in sequence to, the
CC original target functional domain. The new method enables proteins having
CC signal transduction processes, etc. New candidate drugs can be
CC identified, and their specificities (e.g. pharmacological activities) can
CC be assessed using the method of the invention
                                                                                                                                                                                                                                                                                                                DЬ
                                                                                                                                                                                                                                                                                                                                             Ś

Nucleic acid from the human SH3DIA gene and its products, useful for the diagnosis and treatment of myeloproliferative disorders and leukemia.

Claim 2; Fig 14; 99pp; English

CC corresponding to a novel human SH3 gene, termed the SH3DIA gene, that CC contributes to the development of plateletes and the pathogenesis of CR leukaemias, both in general and in particular those involving the CC megakaryocytic lineage. The SH3DIA gene maps to the small candidate region for low platelets on chromosome 21. Sequencing of 5 different CC sizes of cDNA clone from footal brain (see AAZ34570-74) suggests that at CC least 3 isoforms exist. The invention provides methods for the diagnosis and treatment of megakaryocytic abnormality, myeloproliferative disorder, cCC platelet disorder, acute leukaemia, neural disorders, thromobocytopenia, CC platelet disorder on chromosome 21 with leukaemias, neural cc abnormalities, dysfunctions and disorders including brain malformations cc and corresponding cognitive dysfunctions, microcephaly, lissencephaly, cc and corresponding cognitive dysfunctions, microcephaly, lissencephaly. CC and corresponding cognitive dysfunctions, microcephaly, lissencephaly. CC and corresponding the progress and adequacy of a treatment monitoring the progress or megakaryoctyic abnormality, myeloproliferative disorder, haematopoietic disorder, platelet disorder or leukaemia; and creatment of a subject (including a prenatal subject) having treatment of a subject (including a prenatal subject) having classification or its antisense nucleic acid that cc expresses SH3DIA or its antisense nucleic acid

                                                                                                                  This is the nucleotide sequence of full-length cDNA corresponding to a C covel human SH3 gene, termed the SH3D1A gene, that contributes to the C development of platelets and the pathogenesis of leukaemias, both in CC general and in particular those involving the megakaryocytic lineage. The CC SH3D1A gene maps to the small candidate region for low platelets on CC chromosome 21. Sequencing of 5 different sizes of cDNA clone (see C AAZ34570-74) suggests that at least 3 isoforms exist. The invention CC provides methods for the diagnosis and treatment of megakaryocytic abnormality, myeloproliferative disorder, platelet disorder acute CC leukaemia, neural disorders, thromobocytopenia, platelet disorder on CC chromosome 21, low platelets in deletion for 21, association of gains in CC chromosome 21 with leukaemias, neural abnormalities, dysfunctions and CC disorders including brain malformations and corresponding cognitive GC disorders including brain malformations and colpocephaly. Methods are CC class provided for: suppressing cells unable to regulate themselves; all provided for: suppressing cells unable to regulate themselves; and colpocephaly methods are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
